

Herzig Eye Institute Lifetime Commitment (Effective April 2018)

Your original vision correction procedure is backed by the Herzig Eye Institute Lifetime Commitment. Our goal is 100% patient satisfaction. SMILE, LASIK, PRK, Refractive Lens Exchange and Intraocular Collamer Lens procedures performed at the Herzig Eye Institute are covered for a lifetime.

What is Included

A laser enhancement procedure will be performed at no cost provided:

- the surgeon confirms the need and safety for re-treatment.
- you attend all the required post-operative examinations within the first year of your treatment
- you maintain regular annual eye examinations with a qualified optometrist or ophthalmologist at your own cost.

What is not Included

- Eye examinations more than one year after surgery which are not covered by OHIP between the ages of 19 to 65. These annual eye examinations can be performed by your regular optometrist or if you do not have an optometrist, we would be happy to refer you to one in your area.
- Refractive lens exchange or cataract extraction after previous laser surgery.
- Laser enhancement is not applicable to presbyopic correction. Presbyopia is a natural ageing change in the eye and is not covered by the Lifetime Commitment.

What if Technology Changes?

If there is an advancement in laser technology after your original procedure, you will be charged the difference between the old and new technologies.

The surgeon who performed your original procedure may not be available for the enhancement; if that is the case, another surgeon will be recommended. Rest assured the surgeons at Herzig Eye Institute have extensive experience and are highly renowned for their expertise in custom vision correction.
